Your eyes everywhere

Cloud-based video surveillance for your business

cameramanager

Monitor your business, 24/7, all year round. With Cameramanager, it couldn't be easier.

Wherever you are in the world, whatever the time of day, Panasonic's Cameramanager cloud-based surveillance means you can always keep one eye on your business. Whether it's your premises, your assets or your staff, our remote security solutions allow you to access real-time monitoring via your PC, your laptop, your tablet or your smartphone. All set up in three easy steps, with automatic push notifications, and at a very affordable cost.

"Cameramanager offers me the opportunity to have an overview on my shop without being physically present."

Franchisee, New York Pizza

Be in multiple places at once

As a business owner or manager, it's impossible to be everywhere at once. But having a clear overview is critical to success. With Cameramanager, you only need a device with an internet connection in order to maintain a live view of your business. And with our mobile apps, you enjoy complete control and freedom, without having to worry about where you're working.

The full set of professional features

Unlike many cloud surveillance offerings, Cameramanager is fully featured. That means we don't compromise on functionality and performance. Going beyond live view and recording, Cameramanager contains many traditional video management features, such as scheduling, alarming, API usage, user management, high performance 30 FPS for live viewing and many more.

Three simple steps
to complete security

Getting started with Cameramanager couldn't be easier.
All it takes are three easy steps and you're ready to go.

Connect a camera to your network by cable or WiFi

This only requires plugging in via an internet cable. An easy wizard
will then add your camera to the network.

Follow the easy plug & play wizard

Second, add your camera to your Cameramanager account.
This is all plug & play, of course. There's no need for port-forwarding
or router settings. Our software does it all. It's that simple.

Within 60 seconds, you're enjoying total security

Setting up your cameras will take you only 60 seconds. So in less time than
it takes to finish a coffee, you can take an overview of your business with your
security cameras. Recording is done in the cloud, safely and securely.
And you can access it wherever you are.

More intuitive, more flexible, more accessible

Cameramanager's all-new interface makes managing, saving and analysing your visual information easier than ever before.
Smooth, live camera management

The Cameramanager interface allows you to smoothly manage your cameras in real time. The interface is optimised to access video quickly and you can easily manage your cameras and set up shortcuts to functions such as pan tilt zoom, I/O and multiview.

Intuitive recording playback

Cameramanager allows you to playback, export and save video to your 'vault' and to share videos with your social networks. It also allows you to find recordings easily, based on events such as motion, PIR and audio detection.

Save, share and export

Cameramanager keeps your recording safe in the cloud. It's secured and can only be accessed by you or other people you've allowed access.

Your complete overview

The Cameramanager dashboard gives you management information such as cameras that are down, events to follow up, links to event videos and information about your subscription.

Try Cameramanager for FREE
Ready to experience the many benefits of Cameramanager in your business?

Why not give it a go now? We offer a completely free 30-day trial with no contract or obligations. Simply get in touch using the details below and one of our team will help you get started right away.
